

XE Currency Connector for Sage X3

Import Currency Exchange Rates

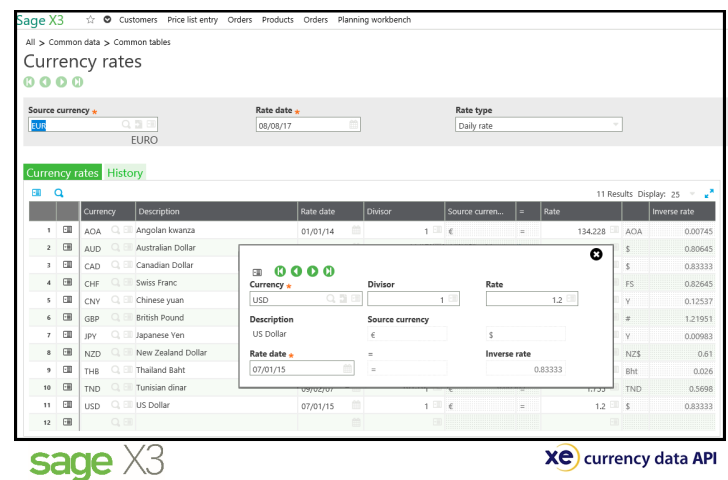

Maintaining exchange rate data is critical to realize true profitability of international transactions. Keeping up with daily exchange spot rates can be cumbersome and redundant. Are you looking for a solution that eliminates manual exchange rate entry across all of the currencies you transact in? The XE Currency Connector for Sage X3 automates the currency spot rates and exchange conversions to mitigate risk of errors, costly pricing mistakes and accounting errors while saving time spent on manual data entry.

Solution

XE is the world's trusted currency authority. XE maintains live exchange rates across the globe every minute. RKL eSolutions has developed a Web Services Connector that interfaces Sage X3 with XE Currency to automate the import of currency exchange spot rates. The interface from XE to Sage X3 is a .net application that retrieves the currency rates from the previous day for all currencies that are identified in Sage X3.

Integration Highlights

- Uses the standard XE Currency Data API*
- Import exchange rates nightly, weekly or monthly
- Run as a Windows scheduled task
- Custom flag allows you to retrieve relevant currencies to 'Get Conversion Rate'
- Leverages standard Sage X3 Currency Rate Tables, Rate Types and History
- Easy to configure and rapid deployment.

XE Currency Data API

The XE Currency Data API is trusted by thousands of organizations worldwide and is accessible through a simple API request. The RKL eSolutions XE Currency Connector accesses the data in JSON format. *XE Currency Data API is only available from XE.com. A separate service plan from XE.com is required. Plans are priced by Frequency & Volume. Visit <http://www.xe.com/xecurrencydata/pricing.php> for more information.
