RKL eSolutions Releases Sage X3 Connector for Formulator

New integration utility helps process manufacturers easily move testing and lab data in Formulator to accounting and production in Sage X3.

LANCASTER, PA – MAY 17, 2016 – RKL eSolutions, an ERP software provider and Sage Endorsed Development Partner, has announced the release of their new Sage X3 Connector for Formulator, enabling batch processing manufacturers to integrate lab operations and testing with accounting and production.

Formulator software, delivered as a web-hosted service, provides formulating chemists, food technologists, and lab technicians with tools for materials development, testing, calculation, and data processing. The new Sage X3 Connector for Formulator integrates lab data in Formulator with production operations in Sage X3 to provide a powerful platform for meeting regulatory and quality control needs across a variety of process manufacturing environments including chemicals, cosmetics, pharmaceuticals, and food & beverage.

The Sage X3 Connector for Formulator lets process manufacturers get more from their ERP and laboratory information systems, says RKL VP of Sales & Marketing Walter Goodfield. "Integrating Sage X3 with Formulator provides efficiency and flexibility you don't get when running them as standalone applications." Goodfield explains further that all of the formulation, testing, and experimentation happens in Formulator, separate from ERP business logic. "It allows Chemists to work and play in Formulator separately from the accounting and production environment until formulations are approved for processing."

Highlights of the new Sage X3 Connector for Formulator include:

- Import raw materials, formulas, bill of materials and packaging definitions
- Review and edit imported records
- Create item and product IDs
- Synchronize costing and quality data
- Schedule the import and publication of data into Sage X3 tables

Goodfield adds, "You really just need to create the formula then export it. The data is seamlessly transferred into Sage X3 for production to begin – no more having to manipulate data in Excel or manually rekey everything from the lab database into Sage X3 which is time-consuming and can result errors."
