DATASHEET

Sage X3 for Medical Device Manufacturing

Helping manufacturers thrive in an increasingly complex landscape

Sage X3 is a modern and scalable cloud-based enterprise resource planning (ERP) platform that enables medical device manufacturers to make better-informed data-driven decisions.

It manages your entire manufacturing operations faster and more effectively, from procurement and scheduling to shop floor, inventory, sales and financials. Sage X3 provides better insight on quality and costs and promotes strategic collaboration and improved operational efficiency. It helps you thrive and remain competitive in the face of growing complexity and competitive pressures.

Key benefits

Gain greater control over processes
Optimize your processes by gaining real-time control over work order details, and deeper insights into your production costs.

Product and process consistency
Minimize the risk and scope of a recall by ensuring the consistent quality of your products while maintaining the flexibility to act on any opportunity.

Complete global compliance
Quickly navigate the maze of global laws and restrictions in order to simplify compliance across currencies, regions, and regulations.

Improve organizational agility
React instantly to incomplete or delayed deliveries and machine breakdowns with automated event responses to limit the impact that these situations have on production.

Achieve operational excellence
Minimize waste and optimize resources with functionalities that control load capacity, foster cost reductions, multi-site planning, finite capacity, scheduling, and user-defined workflow.

Thrive and grow
Generate high ROI, gain faster business insight, intuitively manage operations, improve traceability and manage customer care, warranty, and service orders as part of your core processes.

Key features

Regulatory compliance and reporting
Sage X3 is a fully integrated ERP platform with one common database that delivers out-of-the-box capabilities that enables organizations to meet compliance requirements.

Lot tracking and traceability
Act rapidly to protect your consumers and your business when required with single and multi-level bill of materials, and a full audit trail.

Quality management
Increase confidence in your products and strengthen consumer trust with quality management. Conduct regular inspections and quality control tests to create template specifications for future production jobs using recorded test results.

Full supply chain management
Sweeping supply chain management functionality for all manufacturing needs. Functionality ranges from extensive purchasing data model and advanced purchasing costs management to workflow and logistics, stock valuations, inventory management, sales management, customer service and more.

Extensive manufacturing functionality
Powerful capabilities for all aspects of medical device manufacturing ranging from production management methods by job, order or inventory to bill of materials management. Integrate manufacturing operations with product design and cut costly processes that require customized equipment and controls, and maintain consistent quality levels.

Project management
Integrate project management into all Sage X3 processes and link to quotes, purchasing, sales, work orders, MRP and more, for accurate and cost effective management.
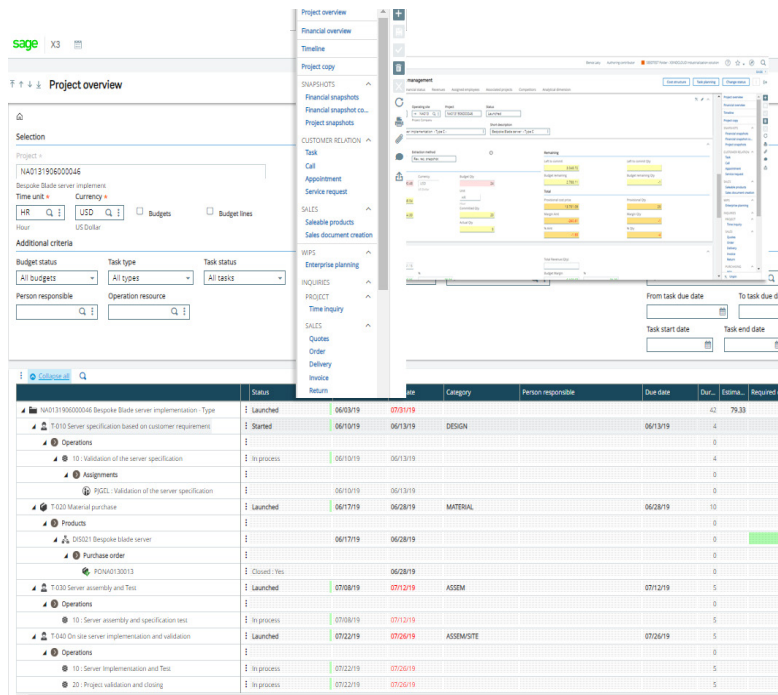

Reporting and business analytics
Gain a large set of features that enable users to analyze data in a self-service manner and to take the right decisions at the right time. Real-time analytics, alerts and notifications empower each role within your organization to respond quickly to changing business conditions.

Financial management
Speak the language of users and partners, manage several companies in the same database, and share the same repository while dedicating some data to one or several site/companies. Manage several structures within a company based on business, organizational, or geographic needs. By design Sage X3 is multi-language, company, site, currency, ledger and legislation so you can operate in any territory with ease.

View projects and tasks that have been booked in a single dashboard for a 360-degree view of your business. Review quality control processes proactively to monitor quality with complete product traceability.
